July 1, 1966

SUBJECT: 123rd Annual Report
Milledgeville State Hospital

Dear Doctor Duval:

Fiscal year 1966 at Milledgeville State Hospital was marked by the consolidation of many new programs commenced in the preceding year and the expansion and development of others to make the patient care and treatment program more effective.

The Hospital's case load continues to rise and some 500 more patients were treated this year than last. In spite of this fact, an encouraging sign is that the resident population decreased a total of 583 patients. The decrease in resident population resulted largely from an increase in the discharge rate as well as the nursing home placement program which placed some 300 geriatric patients in nursing homes and returned an additional 250 to their own homes.

During the year the Hospital admitted a total of 6,914 patients as compared with 6,692 last year. Of these, 5,084 were first admissions, and 1,583 were readmissions. With 4,255 patients returning from furlough, total gains for the year showed 10,922 patients or an increase of 158 over last year. Losses included 1,449 patients discharged directly from the Hospital, 8,905 patients placed on furlough, and 1,151 who died during the year making total losses of 11,505.

The appropriation for fiscal year 1965-1966 was increased from \$17,500,000 to \$19,000,000 making the per diem cost \$4.68 per patient per day as compared with \$4.30 last year. Because of the necessity for implementing certain developing programs, the increase in the budget was unable to be channeled into personnel services so no new positions were added. Normal attrition and employee turnover decreased the total number of employees from 3,120 to 3,067. Since the end of fiscal 1966, additional funds have been made available and most of the vacant positions are now filled.

The psychiatric residency training program has continued to expand with 27 physicians completing various sections of the three year program which is approved by the American Medical Association's Council on Education and Hospitals. The Hospital is now in the fortunate position of receiving a sufficient number of applications for psychiatric residencies so that it can choose the most likely candidates.

Residencies and internships accredited by national organizations continue to be available in clinical psychology, psychiatric social work, music therapy, occupational therapy, recreation therapy, clinical chaplaincy, ophthalmology, hospital administration, and vocational rehabilitation. Returning trainees coming back from stipend programs in the various universities around the country are adding much to the competence and effectiveness of the clinical staff.

The psychiatric out-patient clinic has been expanded but is still working at full capacity with a case load of some 3,000 patients, about 500 of which are seen weekly.

With the opening of the Georgia Mental Health Institute, the Hospital lost several high level staff members in psychiatry, clinical chaplaincy, and social work, as well as some others who took teaching positions around the state. These vacancies have now been filled and the programs continue to operate efficiently.

More than 5,000 visitors attended seminars, teaching sessions, remotivation workshops, and other various in-service training projects some of which are designed to train the individual in basic techniques of meeting the needs of emotionally disturbed persons while others are designed to give the general public, high school and college students, and other interested individuals information as to the basic requirements of good mental health and an understanding of the treatment programs and needs of the mentally disturbed patient.

During the year the new Children's Building was made available for classroom purposes for the school for emotionally disturbed children while classrooms were being constructed in a section of the Boland Building in which all of the children in the Hospital will eventually be housed. The new center for mentally retarded consisting of the Boland and Boone Building is now organized and operating

efficiently with good staff coverage. Training programs in conjunction with several of the surrounding colleges and universities are being developed. The unit also furnishes pediatric services for children in the institution not at present housed in this area.

A large number of volunteers continue to work in various activities around the hospital. These include garden club members, Alcoholics Anonymous, women's clubs, Cub Scouts and Girl Scouts, students from the Woman's College of Georgia and Georgia Military College as well as students from Mercer University in Macon, and the Macon Jaycees. The members of the Georgia Cosmetology and Hairdressers Association brought 137 beauticians to the Hospital for a two day work period in which they furnished patients free permanents, haircuts, hair sets, etcetera. In addition, the group furnished equipment for seven shops which has now been installed and is in use. The Apparel Shop provides patients with clothing; volunteer artists give instructions in art; and the United Church Women, under the direction of Mrs. L.L. Austin, continue to furnish day rooms. Four new day rooms have been supplied during the past year.

Vocational rehabilitation services are effective in helping patients adjust to community life. The rehabilitation houses provided temporary residence to 135 men and women during the past fiscal year and more than 600 patients participated in three or more MSH vocational rehabilitation activities and were referred to local counselors at the time of furlough.

The Recreation Department has shown a growth of professional staff and training programs with greater patient participation. The intern program has been expanded and is now affiliated with four surrounding universities.

The Occupational Therapy Department gave service to 3,408 patients during the year, an increase of 10 per cent over the previous year. Of this number, 1,348 were furloughed, discharged, or transferred to industry.

The Music Therapy staff has now increased to a total of 20 persons with an expanded program decentralized into the various units. Additional facilities and remodeling of some present facilities have made the program more effective and a larger number of patients have been reached.

The Department of Religious Services includes nine clinical chaplains including Catholic and Jewish, two chaplains to the deaf, and seven consultants. During the year the department conducted 948 formal worship services, 821 ward or prison worship services and 24 special services for patients with hearing difficulties. Also, 24 sign language classes were held. More than 9500 pastoral calls were made by the chaplain staff during the year.

The Department of Clinical Psychology evaluated 3,646 patients, gave 300 patients intensive therapy monthly and 800 other patients per month were assisted with brief therapeutic contacts. The school program for emotionally disturbed and educable retarded children continues to grow; however, there are still some 157 children who cannot be accommodated in the school program due to lack of classroom space and shortage of teachers. Two hundred fifty-five children were enrolled during the year. Of this number, 118 were either discharged to their families or promoted to the Yarbrough Building for vocational training. The program for multiple handicapped patients has screened 1,100 patients of which 15 were admitted to the ward. These included totally blind, totally deaf, speech difficulties, multiple sensory handicaps as well as patients with partial disability in each of these fields. Therapy was provided by consultants from the University of Georgia Speech and Hearing Clinic in Athens as well as the staff on the ward.

During the year a behavioral modification program was activated on T Ward in the Whittle Building and some dramatic results are presently being achieved. Three new wards of this type are now being initiated and requests for grants to support the programs have been submitted to the National Institute of Mental Health.

The Psychology Department presently has three interns in residence and fifteen students on scholarship who will return as interns this next year. Twelve research studies were accepted for publication in professional journals by department staff members during the year.

The Social Work Department now includes a total of 48 individuals of whom 15 social workers have Master's degrees. There are 22 social work aides, 11 secretaries and 12 staff members are on educational leave completing their Master's degrees on the Hospital's

stipend program. A high priority program in the department was the Nursing Home Placement Program for non-psychotic geriatric patients. As of June 15, 1966, 737 patients had been referred to the MSH unit of the Baldwin County Department of Family and Children's Services for investigation of eligibility for old age assistance. Of this number, some 550 patients were placed in nursing homes - 287 through the Department of Family and Children's Services, the others by our own Social Work Department. A study conducted at the conclusion of the first year of operation found that of the group placed 5.3 per cent had died and 7/10 per cent had been returned to the Hospital. Most other such programs reported had considerably higher return and death rates.

The Division of Physical Health is facing a demand for a continuous increase in services without the addition of necessary staff. In particular, the X-ray Department needs additional facilities and staff and the budget must be considerably increased to even commence to meet the needs of the patient population.

A new elevator has been installed and the second floor of the west side of the Jones Hospital has been partially renovated.

Basic research in neuro-psychopharmacology and medical genetics continue to provide the hospital with meaningful data to improve the treatment program. A paper resulting from the studies in psychopharmacology was presented by one of the staff physicians at the International Congress of Psychiatry at Madrid.

The Hospital continues to have many problems most of which can be corrected with adequate financing, better staff patterns and more modern and up-to-date facilities. We continue to be encouraged by the dedication of staff and employees to the care of our 11,500 resident patients and the 30,000 Georgians who pass through our doors each year for treatment of mental illness. With better financing at the Hospital and increased development of our training programs together with eventual implementation of the state's plan for regional hospitals and comprehensive mental health centers, the future looks considerably brighter than at this time last year.

Respectfully submitted,
James B. Craig, M.D.
Superintendent

CLINICAL PSYCHIATRY

While the Department of Clinical Psychiatry at Milledgeville State Hospital is beset by the usual problems facing any large state mental institution some encouraging progress has been made during the past year. Some of this is due to the presence of factors which are necessary to attract competent medical practitioners, among these being an efficient psychiatric residency training program, opportunities for physicians to participate in meaningful research programs, and administration which rewards initiative and efficiency, the availability of adequate housing and a rewarding community and social life for the physician and his family.

The psychiatric residency training program which now includes some thirty residents has resulted in applications being received for residency training from a large number of prospective psychiatrists. The result has been that the hospital is now in a position to choose the best of these applicants thereby upgrading the quality of the medical staff. An encouraging sign is that a number of the residents will stay on the hospital staff after completion of their residency training program.

Treatment procedures resulted in the discharge or furlough of 10,354 patients during the past year. With the addition of 1151 patients who died during the year, the hospital shows total losses of 11,505 as against total gains of 10,922 made up of 6,667 admissions and 4,255 returns from furlough. However, the discharge rate showed about a 10 percent increase over last year. The net result was a decrease in the resident population of 583 patients bringing the average daily population to 11,440 for fiscal 1966 as against 11,982 for last year.

The average length of stay for all patients now being discharged is still running around 80 days which compares favorably with other leading psychiatric hospitals in the country. However, the utilization of certain modern therapeutic techniques such as intensive treatment, milieu therapy, and several of the newer behavioral modification programs continue to demand an increased number of professional staff and until these are forthcoming no great advance can be made in the hospital's treatment program. The four basic methods of treatment continue to be electro-shock therapy, drugs, and individual and group psychotherapy.

The Remotivation program which is described elsewhere in this report has been quite successful in obtaining a high discharge rate on several wards. The continuing use of the psychiatric team as an effective treatment tool is resulting in the rapid discharge of newly admitted patients with good success in preventing an increase in the hospital's large population of chronically ill patients. Additional programs particularly those falling in the area of behavioral modification are successfully restoring a number of chronic patients who were formerly believed to be beyond treatment. This has been particularly true in the area of the senile and geriatric patient. In addition, a number of these have been discharged to nursing homes around the state and this has been a factor in reducing the resident population.

During the year the unit system has been strengthened and consolidated. The opening of the new Children's Building has been a cause for rejoicing all over the state as this, at the present time, represents the only state-operated residential center for the treatment of emotionally disturbed children.

The department has worked closely with the Department of Psychology in blending the treatment program for adolescents with the academic training program now in progress and excellent results are being achieved in the early discharge of many adolescents who otherwise would have to remain in the hospital for a considerably longer period of time.

Medical and psychiatric staff of any large state hospital faces problems peculiar to these types of institutions and it is with grateful thanks we acknowledge the dedication and professional competence exhibited by these men and women during the past year.

PHYSICAL HEALTH

The services of the Physical Health Division continued to increase and operational funds continued to decrease. Since 1961, the work in this Division has tripled without any significant increase in personnel and an actual decrease in operational funds. In 1964, Negro patients, for the first time, were assigned fifty-six beds in the Jones building with the addition of only a few attendants. The deficit had to be made up from our already inadequate staff. During the past year the geriatric section was dispersed and integration accomplished,

this resulted in an increase in geriatric patients admitted to the Jones building, and the admission of Negro patients doubled. This necessitated converting two convalescent wards to acute wards, without increase in personnel or funds. Nursing personnel had to be reassigned, resulting in less than 50% of the number needed for adequate care on each ward. The Medical Service has borne the butt of this increase without a compensatory increase in professional staff. Only the absence of an influenza epidemic for the first time in six years and a cool June spared us from catastrophe. In the Rivers building, the Physical Health Division agreed to replace cases of inactive tuberculosis, who required relatively little care, with diabetics, provided that six more attendants be assigned to that building. The Physical Health Division honored their commitment and exchanged more than 250 inactive tuberculosis cases for diabetics. The additional attendants were not provided and as a result of a "freeze" on personnel these buildings had to operate at times with six less attendants than we had when the arrangement was made.

The continual demand for increased physical health services without concomitant increase in personnel and funds has reached the extreme limit. While most of our ills are due to budget, there are other factors that worsen the situation. Physical plant improvement must be funded as soon as possible.

HOSPITALS

In the Jones building one elevator has been up-dated, and a new elevator is being installed. The second floor on the west side was partially renovated. Other renovations that are needed: (1) After restoring walls that were removed, the surgical patients on the first floor, west side, should be moved to the third floor, west side, and (2) the Inservice Training Unit moved to the first floor and obstetric and gynecological unit installed on the first floor. (3) The X-ray Department remodeled and equipped. (4) Outpatient Department renovated.

The most urgent and costly renovation is the X-ray Department. The physical inadequacy of this department should be corrected as soon as possible. Diagnoses are delayed, and high voltage radiation therapy for cancer is non existent. Hundreds of patients will not receive proper care because of this inadequacy.

While our relationship with the staff of the Medical College of Georgia is extremely cordial, they object to a formal relationship until the above deficiencies have been corrected. Many advantages can accrue to us if we can establish this relationship. Our laboratory is outstanding and our surgical suite is excellent. With the expenditure of less than \$500,000, the entire Jones Hospital can be made to meet these high standards.

The Rivers buildings need some renovations and one floor will need remodeling to accomodate the new Neurological Service.

CLINICAL SERVICES

A. MEDICAL SERVICE. Because of integration and dispersion of the Geriatric Unit during the past year, the work of the Medical Service has increased at least twenty per cent. There was no concomitant increase in personnel. This has resulted in a decrease in already inadequate patient care.

B. SURGICAL SERVICE. At the present time the Surgical Staff is adequate to care for the number of patients that can be handled in the number of beds allotted them and with present personnel. There was a sharp increase in the number of general operations performed. However, most operations done are emergent or semi-emergent. The large back log of elective cases cannot be handled in the Jones building. This could be alleviated to some extent by increasing the number of ward and operating room personnel. A Urologist was added to the Surgical Staff.

C. OBSTETRICAL AND GYNECOLOGICAL SERVICE.

Due to the loss of physicians in this department the number of operations performed by this service was reduced slightly. The lack of adequate facilities and a cytology technician limits the cancer detection program. It is hoped that we will be able to employ an available technician soon. A marked increase in the number of cases this department could handle depends on the improvement of facilities in the Outpatient Department.

D. ANESTHESIA SERVICE. Anesthesia service is well staffed. In addition to anesthesia, they are responsible for resuscitation.

E. PATHOLOGY SERVICE. This department is staffed with three board certified pathologist. A cytology technician is needed to screen Papanicolaou smears. Renovation of the available space is urgent.

F. LABORATORY SERVICE. Again there was a marked increase in the number of tests done. Additional tests of a complex nature were added to the list available to the medical staff. In order to continue with the past excellence at least four more technicians and an assistant director are needed.

G. RADIOLOGICAL SERVICE. There has been no significant improvement of the deplorable facilities of this department for over ten years. This department is directly involved in diagnostic procedures throughout the Milledgeville State Hospital. Its continued inadequacy is reflected in poor services to all patients. This department should be considered to be in an emergent state and supplemental funds to remedy this situation requested immediately. Important diagnostic films, if obtainable at all, are unobtainable in some cases for six weeks. Neurosurgical radiological examinations are limited to one half day a week.

H. RIVERS BUILDING. This complex of buildings, because of the decline of tuberculosis is being more and more utilized for metabolic disease, especially diabetics. The need for added personnel is acute.

I. DIETETICS. Special diets are available only in the Jones and Rivers buildings. We have had only one dietitian on duty for the past year. We do not have room in these buildings for all cases needing special diets. Efforts are being made to employ three or four more dietitians. The Food Service Department is a separate operation. The food for the Physical Health Division hospital is prepared in the hospital buildings and not in the main kitchen.

J. CONSULTANTS. During the past year consultants from the Medical College of Georgia were active in the following departments: Medicine, Surgery, Ob-Gyn. Consultants not affiliated with the Medical School were active in Dermatology, Ophthalmology, and Otolaryngology.

K. RESIDENTS. By formal agreement, a senior resident from the Mayo Graduate School of Medicine, Rochester, Minnesota, serves his last three months in the Ophthalmology Department of the Milledgeville State Hospital.

NURSING SERVICE

Due to integration and dispersion of the Geriatric Service it was necessary to convert two convalescent wards to acute wards. Requests for additional personnel were not met, but we were not permitted to fill positions vacated by resignations, etc. An already inadequate nursing staff had to be further spread, resulting in grossly inadequate nursing service. At the present time the nursing staff in the Jones building is only 50% of that necessary for minimally adequate care for patients. In the Rivers building there was an exchange of patients needing little or no care for diabetics. This resulted in a deficiency of six attendants. Not only were six attendants not furnished, but the Rivers complex of buildings operated all of the year with less than their normal complement. It is evident that the continual increasing load imposed upon the nursing service has far exceeded any reasonable limits for adequate care of the patients. It is only the dedication and willingness of nursing personnel to work beyond what can reasonably be expected of any person over a long period of time that the Physical Health Division has been able to operate at all. Nursing care is not and cannot be satisfactory with the present staff.

GENERAL SERVICES

A. HOUSEKEEPING DEPARTMENT. The Housekeeping Department of the Jones building continues to be very effective in keeping the hospital clean and sanitary. This is a very important factor in the treatment of patients and to the morale of the employees in having a clean place to work.

There is a very definite need for a Housekeeping Department in the Rivers building which would consist of three housekeepers, forty-five cleaning personnel, and the necessary equipment to keep the three buildings clean and in a sanitary condition.

B. MAINTENANCE DEPARTMENT. During the past year the only area of the Jones building receiving any renovation was the Nurses Station on Jones 2 West. This area was enlarged to accommodate a large Nurses Desk and Medicine Cabinets. The two small nurses stations were consolidated into the larger area.

The following areas were listed in the 1965 annual report as needing renovation and are still in need of being renovated to provide proper hospital care to the patients;

1. X-Ray Department.
2. Outpatient Department.
3. Completion of third floor west, north wing which has been unusable for the past three years. This space is needed very much to relieve over-crowding in other patient area of the building.

The elevator system of the Jones building is being improved with a complete overhaul of the west elevator that was completed during the past year after a breakdown that resulted in the non-use of this elevator for a period of three (3) months. A new elevator is in the process of being installed in the east building which will help to solve the elevator traffic problem in this area.

C. ADMISSIONS AND MEDICAL RECORDS DEPARTMENT.

This Department is in need of additional personnel due to the increased work load during the past year.

D. COMMUNICATION AND INFORMATION. The two secretaries in the Secretarial Pool continue to be very effective in handling the medical dictation and other secretarial work of the different departments of the Jones building. However, the work load has increased to the point that at least one more secretary is needed in this department.

PREVENTIVE MEDICINE

Preventive medical services are offered in addition to hospital, out-patient department and clinical services. The following examinations are done.

1. Hemoglobin and hematocrit, semi-annually.
2. White blood count; differential is done when count is below 4,000 or above 10,000.
3. Blood sugar and urea nitrogen, semi-annually.
4. Urinalysis, semi-annually.
5. Special bacteriological studies where necessary to determine bacteria that may have become epidemic.
6. Determination when necessary where employees and patients might be carriers of epidemic strains of bacteria.
7. Screening of new employees by physical examination, CBC, Urinalysis, VDRL, and chest X-ray.
8. CBC, Urinalysis, VDRL, Fasting Blood Sugar, BUN, and Chest X-ray are done on each new admission.
9. Papanicolaou smears on each new female patient and on each resident female patient once each two years.
10. PKU on newborns and all children in hospital. In future on all children admitted.
11. Minature chest roentograms, annually.
12. Ophthalmology survey for blindness.

The following are needed:

1. Tetanus immunization for all patients in the hospital and all patients to be admitted.
2. Influenza vaccination yearly for all dibilitated patients and all patients over fifty years of age. In epidemic years all patients should be immunized.

3. Electrocardiograms should be done routinely every two years on patients over fifty.
4. Otolaryngology Department should be established and a survey for deafness should be made.
5. A health program for employees, which should include annual CBC, Urinalysis, Blood Sugar and Urea Nitrogen and Chest X-Ray.
6. All employees should be vaccinated for small pox.

DENTAL DEPARTMENT

The objectives of the Dental Program are (1) regular examinations of all patients, (2) clinical treatments and (3) prevention. All new patients have a dental examination upon admission. All patients on all wards are examined periodically. Patients needing treatment are given appointments at the Dental Clinic for correction of any abnormal condition found. Preventive measures are (a) the presentation of informal programs on oral hygiene and ward dental care to the patients and attendants on the wards of the Hospital, (b) the emphasizing of these preventive measures to special children's classes and to inservice training classes, (c) the provision of tooth brushes, toothpaste, and mouthwashes for the patients, (d) special chair side instruction stressing oral hygiene, and (e) inclusion of articles written by our staff in "The Builder", the weekly hospital newspaper.

During the year there were few vacancies on the staff. A full staff of eight dentists were on duty practically all year. Dr. John E. Chrietberg, Director, Branch of Dental Health of the State Health Department, and his staff including Dr. Charles B. Jones, Central Regional Dental Consultant, continued to provide the Dental Department with administrative consultation.

During the year 41,071 operations and treatments were completed and 20,923 oral examinations performed. The Dental laboratory processed 524 appliances and 265 additional appliances were repaired.

The Dental Department treated many cases requiring oral surgical procedures. The Dental Department's consultant in oral surgery is Dr. Clyde D. Marlow. Many cases involving oral surgery were treated in the operating room of the Jones building. Dr. J.F. Collins of the Emory University of Dentistry, conducted , in conjunction with the Dental Department of the Milledgeville State Hospital, three phases of a study of the oral topical uses of Vancomycin, an antibiotic drug.

A dental laboratory technician skilled in case procedures in addition to other phases of dental laboratory work was obtained during this fiscal year. All dental laboratory cases including cast cases which were formerly sent to commercial laboratories are now completely processed in our laboratory.

Within the past year the Dental Department has instituted a central system for making all appointments for the staff dentists and dental hygienists, resulting in an increase in the average daily number of patients treated.

Plans have now been completed for constructing two operatories, each to have three units and chairs, and a class room in the downstairs section of the Dental Clinic. Most of the equipment needed for these operatories has been obtained and construction will begin within the next three months. With the addition of these operatories, each dentist on our staff will have two chairs available for his use enabling him to see more patients.

The most urgent needs of the Dental Department are listed as follows:

1. Four additional dentists and six assistants are needed for an adequate dental program. The addition of these dentists would increase our staff to twelve dentists. This meets the minimum dentist-patient ratio requirement of the American Psychiatric Association for Mental Hospitals.

2. Two institutional workers are needed for the general cleaning of the Dental Clinic.

3. A problem is the inability of the wards to bring their patients on time. A solution to this problem needs careful study.

4. Three additional dental consultants are needed for clinical services and staff training.

5. To accomodate additional patients, at least four completely equipped operatories should be built in or adjacent to some of the Units of the hospital.

PHARMACY DEPARTMENT

The appearance of the waiting room was improved and a rain shelter was built over the entrance steps to the Pharmacy waiting room. Intercommunication equipment has been procured and will be installed in the near future.

A small Ointment Grinding Machine, and a Tablet and Capsule Counter, electric, have been added. Two additional Tablet and Capsule counters are needed. It is expected that with these counters the dispensing and control of drugs can be done with precision, and they will pay for themselves within a year. A distilling apparatus is needed.

In addition to the two pharmacists on duty during the past year, the educational program supported a pharmacist studying for the Graduate Degree of Doctor of Pharmacy. He will return here in December. We will then have the necessary complement of pharmacists for an institution this size. It is proposed to assign a pharmacist to dispense and control drugs in the units. As soon as a room in the Jones building can be remodeled a pilot study will be instituted there. Another technical helper, a typist and an assistant driver are needed. The latter is essential because of patient help on the truck.

During the past year, at a cost of \$813,267, a total of 121,475 prescriptions were filled. At a cost of \$725,511, 95,109 prescriptions were filled for the wards; at a cost of \$78,239, a total of 24,156 prescriptions were filled for patients on furlough; and at a cost of \$9,516, a total of 2,210 prescriptions were filled for employees. The average cost of prescriptions for the furloughed patient was \$3.65.

NURSING SERVICES

Some progress is evident in the Department of Nursing Services in spite of continuing obstacles and problems. The department has been represented by staff members at a number of state and national meetings including the American Nurses Association in San Francisco, California, the Hawaiian Pot Pourri in Honolulu, and the Georgia State Nurses Association in Savannah. Representatives of the department attended a number of workshops, seminars, conferences, lectures and meetings. Some of the subjects included "The Emotionally Disturbed Child in the Community," "Group Behavior and Leadership," "The Battered Child," "Introduction to the Attitudes and Techniques Useful in Rehabilitation of the Chronic Alcoholic," "Maintaining Open Channels of Communication in a Psychiatric Milieu," "Program and Professional Development in Community Mental Health," "In-service Training Directors of NIMH Awarded Inservice Training Grants," "Leadership Development for Nurses," "Alcoholic Studies," "Supervisors in Public Health Nursing in Georgia."

A re-survey visit was made to the Warren A. Candler Hospital School of Nursing by faculty representatives of Milledgeville State Hospital Affiliate Program and the National League for Nursing.

The annual faculty meeting was held September 23, with forty-three members attending. Six schools of nursing were represented. The Board of Examiners of Nurses for Georgia was represented by the Educational Supervisor.

Several problems concerning the progress of the Affiliation Program were brought to the attention of the faculty. Two most pressing problems involved the number of students we would be able to accommodate in the program each quarter and the possibility of recruiting more instructors. A sub-committee headed by Mrs. Genevieve Jones, Educational Supervisor of the State Board of Examiners of Nurses for Georgia, was appointed to study the problems and make recommendations at the next faculty meeting in the fall of 1966.

New contracts had been drawn up and were distributed for study by each School of Nursing before July 1966. These new contracts include a fee of \$30.00 per student per quarter, to be paid by the affiliating agency.

The Grady Memorial Hospital School of Nursing will not renew their contract, as they plan to provide their own program in Psychiatric Nursing. Warren A. Candler Hospital School of Nursing will terminate their present program and will become one of the first schools to offer a two-year Associate Degree Program in Nursing under the auspices of Armstrong State College. Our contract with the school will expire in the spring of 1968.

Milledgeville State Hospital Cooperating Agency will be receiving students from seven diploma schools of Nursing.

During the past fiscal year, 368 student nurses from the following Schools completed the Affiliation Course in Psychiatric Nursing:

Georgia Baptist Hospital	Atlanta
Georgia Southwestern College	Americus
Grady Memorial Hospital	Atlanta
Hall School of Nursing	Gainesville
Macon Hospital	Macon
Medical Center Hospital	Columbus
Piedmont Hospital	Atlanta
Warren A. Candler Hospital	Savannah

During the next fiscal year we are anticipating considerable improvement in the facilities for the Affiliation Program, as the fees for student nurses will make additional funds available to use for the specific purpose of education. Heading the list for improvements will be the relocation of the library, the employment of a full-time librarian, as well as the purchase of additional books. During the last year, only eleven new books were added to our present library.

We are looking forward with a great deal of enthusiasm to a workshop which will be held on our campus this month (July) on "Nurse-Patient Interaction." This workshop will be conducted by Dr. Shirley Burd, of Rutgers University, for a limited number of our faculty members. A representative from each School of Nursing affiliating with our hospital has been invited to audit the workshop.

In July 1965, Mrs. Mattie Lou Pennington, R.N., was transferred from an Instructor's position to Remotivation. Mrs. Glenda Ridley, R.N., B.S., has carried on the Inservice Education Program under the supervision of Mrs. Vivetta Kramer. Mrs. Christine B. Brookins, R.N., was added to the Inservice Education Staff in November.

As the fiscal year closes, four classes of students have completed the Attendant Training program, with sixty-three Attendants receiving certificates.

In December 1965, the clinical experience in the Attendant program was revised and broadened to include individual patient assignments, ward conferences and the use of nursing care plans. The Charge personnel of the wards collaborate with the instructors in students' clinical learning experience. In conjunction with the Federally-supported Inservice Training Program staff, definite policies for the role and functions of the instructors in the clinical areas were formulated and approved.

Inservice Education programs for all of the Units of the hospital have steadily progressed and have been held monthly with the exception of December. Topics have centered around: Orientation; Skill; Training; Continuing Education; Leadership and Management geared to focus on specific needs of the respective Units. Paradisciplines and Department heads have participated in many of the programs. With the shortage of personnel in every hospital Unit, we feel that attendance at Inservice programs by personnel from all tours of duty has been most commendable.

The Inservice Education Department's film projector has been in almost constant use in the various Units, affording the showing of films helpful to the Nursing Service personnel of the Unit.

In July 1965, we were most fortunate to have been awarded a Federal Grant of \$22,000 per year for four years for Inservice Training Project for Psychiatric Aides. Mrs. Vivetta Kramer, our Coordinator of Inservice Education Programs was assigned the Directorship of the Training Project. Two additional instructors have been employed under the grant.

An unused wing in Jones Building was renovated for use in the Training Project, and "open house" was held there prior to the beginning of the program.

The purpose of this Training Program is:

To achieve therapeutic performance of Nursing Aides for improved patient care through establishment of a correlated didactic and clinical education experience program, with subsequent follow-up by Supervisors in the Clinical area.

A ward Management Class was set up after considerable planning and with full support from Administration. This, we felt, was vital to the accomplishment of the Inservice Training Programs in order to elicit cooperation and collaboration of all categories of supervising personnel. This class has been conducted in three groups, and has involved all categorical heads of Nursing Supervisory personnel. A total number of 558 certificates of attendance were awarded. Results of this class have been reflected in Nursing Service and Inservice Education programs throughout the hospital.

The Director of Nursing continues to hold regular meetings twice each month with the Assistant Directors of Nursing in charge of the hospital Units. These meetings focus on dissemination of information from the Nursing level, discussion of mutual problems and exchange of ideas or suggestions for the improvement of nursing service.

As this fiscal year closed, we had 105 Registered Nurses on our staff as compared with 96 last year. There has been no appreciable increase in Attendant personnel during the year. As a matter of fact, the shortage of personnel has been more acute due to a freezing of Attendant position vacancies over a period of several months recently. Nursing Administration deplores the fact that Attendant positions should ever be frozen. With our patient-attendant ratio of 1:8, we are inadequately staffed when all positions are filled.

On behalf of the Nursing Department, we express our appreciation to Administration, to the Doctors and to all members of the paradisciplines for the assistance, support and understanding they have given us.

We have passed another busy year. Looking retrospectively, we are frustrated by ambivalent feelings, -- we have experienced the thrills of progress and success; we have also felt the sting and remorse of failure when we realize that Nursing Service has far to go before we can provide quality nursing for our patients.

We offer the following recommendations as means of improving Nursing education and services.

1. Moving of the library from the Education Building to more spacious quarters in Nurses Residence, and adding a sufficient number of volumes to provide us with an adequate library.
2. Establishing a position for and securing the services of a full-time Librarian.
3. That a film-projector be purchased for each Unit of the hospital to be used in Inservice education.
4. That priority be given in Budget planning to add a substantial number of new Attendant positions each year until an adequate number has been reached.
5. Straight eight-hour shifts for all Nursing personnel. This can never become a reality until we have an adequate number of Attendants. Morale will continue to be low in those employees who must split their duty hours.
6. In as much as one of our greatest weaknesses stems from lack of supervision, it is recommended that serious consideration be given to establishing Supervisory Positions sufficient to provide adequate supervision coverage in all hospital Units during all tours of duty.

REMOTIVATION

Two long-range goals characterized the beginning operations of patient remotivation service during this fiscal year: (1) To improve total patient care by increasing numbers of people involved in the program by better utilization of ward and building resources and by continuous educational activities; (2) To lay the ground work as a designated Regional Training Center for Remotivation.

Approaches used during 1964 were continued and expanded. These included demonstration centers, seminars, observations, individual and group projects, teaching stations, council meetings and various other conferences. This year emphasis was placed on coordinating treatment team efforts with other disciplines, developing outstanding aides as leaders in the respective units, developing ward programs building by building and developing a central library and materials center.

The significant point of emphasis used in all conferences is the role of the charge attendant and his ward team in putting the program across to as many patients as possible. The hospital-wide program continues to be coordinated by the central council composed of the administrative staff and a leader from each unit council.

Two hundred eighty seven aides have been trained in remotivation techniques bringing the total to 1,445. Forty trainees were recently awarded certificates bringing the total to 454 certificates awarded since the start of the program. Two hundred fifty three patient groups have been formed and these held 3,036 sessions with an estimated 2,530 patient participants. Non-formal types of remotivation activities totaled 121 with an estimated 145 patients participating.

A recent innovation has been the use of Neighborhood Youth Corps enrollees who have been trained in remotivation techniques. Of the present 30 enrollees, 19 have been trained and certified while 11 are now receiving orientation. The NYC remotivators conducted 55 patient groups involving 660 patients as well as 14 different types of non-formal remotivation activities involving some 700 patients with assistance from aides and remotivators.

The training of the NYC enrollees commences with a few weeks of observation during which the NYC trainee works along side the attendant learning ward routine, ward living, patient behavior, etcetera. Following this a thirty hour training course approved by the American Psychiatric Association is begun and includes one hour daily five days a week with practice sessions in the areas assigned. When the training period is completed, groups of patients are assigned and scheduled for formal sessions. Continuing supervision is an essential part of this training program.

An outstanding event of the past year was a two and a half day remotivation workshop held in April for the psychiatric hospitals in the Southeastern Region as well as a few of the nearby nursing homes in Georgia. Some 85 delegates attended representing the States of Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, and Tennessee. A total of more than 150 people including Milledgeville hospital staff participated in the workshop. The keynote speaker was Mr. Francis Dugan, remotivation project director from the American Psychiatric Association and Smith Kline and French Laboratories, whose topic was "Remotivation Participation Throughout the Country." The hospital staff participants were headed by Dr. James B. Craig, Superintendent, whose topic was "The Milledgeville State Hospital Treatment Program," and Dr. Lolita Rutland, R.N., director of remotivation service, who spoke on "Developing Remotivation in a Large State Hospital." Seven different tours were conducted by the staff demonstrating various remotivation projects.

Because of the need for a medium of communication for the Southeastern Region among remotivation hospitals, the Southeastern Remotivators Newsletter has been commenced and is now issued quarterly and distributed among the southeastern mental hospitals, other remotivation centers and hospitals throughout the country upon request.

Remotivation service continues to participate in orientation of staff, residents, interns and students in the aides' in-service training. A number of lectures to various professional and civic groups throughout the state were presented.

MEDICAL LIBRARY

The number of books purchased during the budget period 1965-66 has been very limited. Practically all of these new texts were in the fields of psychiatry and psychology and were paid by a donation from a commercial house. On account of the lack of acquisitions for the Medical Department the holdings of this department are not up to date, and funds are urgently needed to fill gaps in the collection.

By adding to its list of journals three new subscriptions for the Psychiatric Aide Department, the Medical Library has now 108 journals.

Much of the needed material has been obtained from other libraries through interlibrary loans. A total of 555 photostatic copies of articles and 76 books were received by interlibrary loan during the current budget period; however, the National Library of Medicine considered the extent of the requests made by this Medical Library unjustified and instructed the librarian to limit requests to interlibrary loans to ten copies monthly per person, beginning March 1966. In answer to one special request the National Library of Medicine gave us the benefit of their computer service, which is gratis.

The construction of a fire exit in the Jones Building decreased the library office and storage space considerably, but plans are underway for relocation and expansion of the Medical Library and a centralization of holdings from various departments within a new library in the former dining room of the Brantley Building.

With a view to this move the holdings of the Nurses Library and of the Psychiatric Aides of both federal and state programs have been catalogued and processed.

PSYCHIATRIC SOCIAL WORK

The staff of the Social Work Department on July 1, 1965 consisted of one director, one chief social worker, five senior social workers, seven social workers, twenty social work aides and ten secretaries for a total of 44. On June 30, 1966, in addition to the director and one chief social worker, there was one senior social worker, twelve social

workers, twenty-two social work aides and eleven secretaries, totaling 48. While the department sustained an overall increase in staff, there was a significant loss in the senior social worker, or supervisory level staff.

In addition, the department had twelve staff members on education leave in various stages of completing their masters degree in social work, supported by stipends from the hospital. During this fiscal year, the department also provided field training experience for ten graduate social work students in affiliation with three schools of social work: Florida State University, Atlanta University, and the University of Georgia.

A high priority program in the department during the year was the nursing home placement program for non-psychotic geriatric patients. As of June 15, 1966, 737 patients had been referred to the MSH Unit of the Baldwin County Department of Family and Children Services as indigent for investigation of eligibility for Old Age Assistance and subsequent vendor payments to a nursing home. Over 550 patients were placed in nursing homes, 287 through the DF & CS. A study conducted by the department of the nursing home placement program at the conclusion of its first year of operation found that of the group placed, only 5.3 percent had died and only 7.7 percent had returned to the hospital. Most other such programs reported in the literature had considerably higher return and death rate.

On October, 1, 1965, a director of staff development and in-service training was appointed and this new program has considerably enhanced the training opportunities within the department.

Statistically speaking, during the past year the staff wrote a total of 12,734 letters to relatives, community agencies and other interested parties. Five thousand seven hundred and seven social history questionnaires were mailed and 831 case records were abstracted and sent to community agencies.

During any given year, the Social Work Department performs a great many routine functions for the patients. In the past year 9,368 forms were completed which included insurance forms, social security forms and Department of Family and Children Services forms, among others.

The social work staff held 19,230 interviews with in-patients and /or their families, and 10,134 interviews with out-patients and /or their families. One thousand three hundred seventy nine group sessions were conducted with patients which varied from orientation of new patients, ward government, preparation of patients for transfer to social group work treatment. As a result of this activity, 2,004 patients were released from the hospital through social work planning. This included placement with relatives, independent living arrangements, family care, nursing home placement, or out-of-state transfer.

CLINICAL PSYCHOLOGY

CLINICAL SERVICES

The Clinical Psychology Department continues to be accredited at the highest level by the American Psychological Association and continues to establish and maintain high standards for all programs under its administration. Constant efforts are made to improve psychological services and to initiate new programs which will be beneficial to the patients and to the hospital.

During the year, the staff evaluated 3,646 patients. Intensive therapy was given to approximately 300 patients monthly and 800 other patients, monthly, were assisted by receiving brief therapeutic contacts. Staff members spent many hours in teaching and research.

In addition to the usual clinical services to units, evaluations and treatment, the department was administratively responsible for a number of special programs: treatment-education program for children, treatment program for patients with multiple handicaps, behavioral modification program, training of interns in clinical psychology, clinical research, and education in clinical psychology.

During the year, emphasis has been placed on improving psychological evaluations and psychological treatment by initiating more scientific and efficient techniques in both of these important areas. Also, a concerted attempt has been made to greatly increase psychological services to all the patients in the hospital by increasing the number of technicians, training them to function at more complex levels, and carefully directing and supervising their work by qualified doctoral clinical psychologists. Added details concerning these specialized programs follow.

TREATMENT-EDUCATION PROGRAM

Note: This Program would not be possible without the support of the Georgia State Department of Education and the Baldwin County Department of Education.

The program for children and adolescents continued to expand during this past year serving an increased number of patients while offering programs for several new classes of patients. A total of 301 new admissions were screened for the school program and of these, 195 were accepted. Sixty patients continued in the school program from the previous year, bringing the total number of children enrolled to 255 for the year. Of this number, 118 were either discharged to their families or "promoted" to the Yarbrough Building for vocational training.

The school program is divided into six general areas. Serving the needs of the emotionally disturbed patient comprises three of these areas. The first concerns the primary grades in school. This past year, two teachers have taught in this section. The second is the intermediate and this group comprises the upper level of the grade school group. Four teachers teach in this area. The third area is the high school section, and five teachers compose the faculty at this level. Two of the high school teachers alternated in teaching mathematics and giving individual, tutorial instructions to children who are not capable, at this time, of fitting into a regular school group. The fourth area of the school program deals with educable retardates. Five teachers are teaching in this section, and these classes have been held in the Boone Building, which is part of Unit Six. The fifth general area is the adult education section. These patients all display some academic retardation and their instructions are geared toward giving them the basic academic tools that are required for employment. There are 16 teachers involved in this program; half teach adult retardates, and the other half teach adults with average or close to average intelligence. The adult retardates are taught in the Boland Building and the adults with average intelligence meet their classes in the Yarbrough Building. A new experimental program involves working with under-age trainable retardates. One attendant has been detailed for this work and his primary goal is the teaching of social behavior

to the children. It is hoped that this program will expand to meet the needs of the large number of trainable under-age patients here at the hospital. A program is just beginning at the University of Georgia to prepare teachers for working with trainable children. It will therefore probably be several years before any of these people have completed their training. In the meantime, a well motivated attendant should be able to teach a variety of management-type behavior to these children, thus allowing them to begin relating to one another in an acceptable fashion.

Two additional retired teachers of retardates were added to the staff in September, 1966. Present long range plans call for the addition of two teachers in the retarded area for each of the next five years. It is hoped that in September of 1967, a principal can be recruited to administratively head-up this section. A potential candidate for this position is currently being interviewed and actively considered. The adult education program is supported by a federal grant and this grant will continue until at least June, 1967.

In November of 1965, the emotionally disturbed classes were moved from the Powell Building to the Children's Building. This move resulted in concentrating the teachers, the students, and the equipment in one center, and thus, greatly facilitated the teaching task. Plans are now being completed for the construction of a classroom center in the Boland Building, which will include 24 classrooms, with accessible office space and the inclusion of six one-way screens for staff research purposes. The new children's center has extensive playground equipment and this equipment has been successfully employed since this past November. The physical co-ordination of many of the younger emotionally disturbed children and of the retarded children has improved substantially as a result of having this equipment.

The Special Education Program was part of the local county school system this year, and will remain so for the coming year. This arrangement permits financing by the State Department of Education and facilitates the transfer of academic credits earned while in the hospital by our patient-students, to their local school system, following discharge. Administrative plans are now being made for our educational program to fall directly under the State Department of Education, rather than the local county system. This procedure would allow the program to be eligible for numerous federal grants which are now available, but are denied to the program because of our local county affiliation.

Psychotherapy has been available in the past to all the school children. However, because of the substantial increase in the number in the school program this service is no longer available on the scale that it has been in the past. The professional staff at the hospital has failed to grow at the same rate as the under-age patient admissions. Approximately one-third of all the school children in the Special Education Program have been receiving psychotherapy. This therapy was carried out by members of various departments in the hospital quite successfully.

All of our teachers are involved in ongoing programs at a recognized university. Most of our teachers are enrolled in the graduate division of the University of Georgia, in addition to those enrolled in Atlanta University and the University of Syracuse. Our program is affiliated with the University of Georgia and the University of Florida for training teachers of exceptional children. Students from the University of Georgia are now receiving required training experience in our hospital program. Additional training classes are also offered at the hospital for teachers. There is an inservice training program for our teachers in which the modification of behavior is accentuated. Coordination between all related skills in other disciplines have yielded a satisfying and rewarding improvement in the patient-student achievements.

Program for Multiple Handicap Patients

Progress continues to be made in this program which was set up in 1964, originally for those patients suffering from some speech, hearing or vision problem in addition to their mental illness. In November of 1965 the scope of this program was enlarged to include patients suffering from any physical disability. The first patient in this category, a white male, who had suffered a cardiovascular accident, was admitted on November 30, 1965, and since that date 10 patients with miscellaneous physical handicaps have been admitted.

Since the ward was opened, a review of admissions reveals that the percentages of total number of patients admitted fell into the following categories: totally blind, 14 percent; partially blind, 6 percent; totally deaf, 18 percent; partially deaf, 28 percent; speech defect, 18 percent; multiple sensory handicap, 6 percent; miscellaneous physical handicap, 10 percent.

Screening of the hospital population for suitable candidates for this ward is on a continuous basis, and to date more than 1100 patients have been screened. Special services in each of the major areas of the handicapped have been enlarged and broadened.

For those whose deprivation is in the visual field, the program includes, in addition to psychological treatment, training in travel and mobility by a consultant from the Georgia Academy for the Blind. Talking book machines are available and "books" are provided by the Library for the Blind. For those who have mastered Braille, publications and books in this media are provided. For the blind, as well as for those patients suffering losses in any of the other major areas, corrective surgery in cases where this is felt to be beneficial, is available in the surgical units of the hospital.

For those patients whose sensory loss deals with speech, speech evaluation and therapy is provided by consultants from the University of Georgia Speech and Hearing Clinic in Athens, Georgia. Periodic visits by these consultants provide the corrective therapy needed by these patients in their efforts to learn intelligible speech patterns.

For the deaf and hard of hearing, these special services include periodic visits by teachers skilled in the use and teaching sign language. It further includes evaluation by audiologists from the University of Georgia Speech and Hearing Clinic. Recommendations of these audiologists are followed, and in some cases it is possible for Vocational Rehabilitation to provide hearing aids that partially alleviate the hearing loss. Recently, group therapy using a sign language interpreter has been initiated for the deaf by Dr. Lucik.

For all patients on Yarbrough No. 4, psychological therapy, both individual and group, is available. Besides this, the other therapy and service departments of the hospital are utilized. These include occupational therapy, music therapy, recreation therapy, social service and others.

Improvement in patients treated on the ward to date are striking. Approximately 80% show marked improvement, 14% are rated as unimproved with the remaining 6% showing continued regression from their pre-illness levels.

Behavioral Modification Program

During the current year, an experimental ward project was initiated on "T" Ward of the Whittle Building by the Psychology Department. This ward is a behavioral modification ward which utilizes the principles of operant conditioning techniques first described by B.F. Skinner and applied by Ayllon and Azrin in a hospital setting. Additionally, this ward incorporates attitude therapy, ward government principles, and some other unique innovations. More importantly, this ward has become a training and teaching site whereby psychiatric aides learn to become behavioral technicians.

Although this ward is only now moving out of the project demonstration phase into a full time training site, it is felt that some new and important techniques relating to patient care and ward administration have been developed. Currently, three new wards of this type are being initiated. This program has succeeded in improving patient treatment by utilizing more scientifically valid techniques and by using methods which more fully utilize sub-professionals and therefore has not required an increase in the number of scarce, professional Psychologists.

Clinical Training

This year we have had a total of four new interns in residence, three from the University of Georgia, and one from the University of Florida. There are, currently, 15 students on scholarship at the Universities of Georgia, South Carolina, and Florida who will return as interns this next year. Professional training has been concentrated in Unit 5, and this is felt to have considerably facilitated training and supervision. An observation room has been constructed in this unit, allowing close continuing supervision of interviewing and psychotherapy. Further, a system is currently under development that should make it possible for the supervisor to communicate with the intern during therapy.

A behavior therapy ward, operated on the basis of applied learning theory, has been established in the male building of Unit 5, and a second ward in the female building is proposed for the near future. These wards should provide interns with valuable learning experiences based on proved scientific principles of our own profession, and are administered by psychologists.

Research

During the year, the departmental staff had 12 research studies accepted for publication in professional journals. Four other studies and two grant proposals were submitted. Approximately 24 research studies were in progress at any one time. During 1965, this department produced more published research than any other internship agency approved by the American Psychological Association. Efforts have been made to establish and improve, a research laboratory for research in clinical psychology.

Education in Clinical Psychology

The educational endeavors of the psychology department are divided into in-service teaching and public education. The in-service teaching includes brief encounters and formal classroom activities. Under the supervision of the director of education, classes are held with psychiatric residents, student nurses, social nurses, social work aides, psychiatric attendants, and music therapists covering such topics as history and review of psychology, abnormal psychology, psychotherapy, etc.

The public education program is carried out in conjunction with the Public Relations Department and is geared toward orienting the public to their state hospital and the importance of mental health problems. College and university classes, high schools, lay organizations, schools of practical nursing, etc., who visit the hospital are oriented to the functions and practices of the hospital, tour wards, and participate in verbal interchanges with the patients. The overall goal of this program is to dispel many erroneous notions held by the public concerning the State Hospital and emotionally disturbed individuals. During this past year, over 2970 people spent a full day at the hospital under this program. In addition, special groups such as the Georgia Mental Health Association, alcoholic study groups, and ministerial associations visited the hospital for special programs organized to meet their special needs.

RELIGIOUS SERVICES

For the Department of Religious Services this year has been characterized by partial reorganization and continued consolidation of its position within the hospital staff.

PERSONNEL

This department incurred the loss of three clinical chaplains, among them the Chief of Chaplains, who went to staff the chaplaincy department of the Georgia Mental Health Institute. Three clinical chaplains have been employed during the year, which keeps the staff at a minimally adequate level. The Roman Catholic priest was placed on the staff full time. This increased his ministry to Catholic patients and also created an ecumenical spirit within the department.

A previous plan of department organization, through which the clinical chaplains coordinate the various services of the department, was reactivated. Monthly reports by the coordinators keep the department appraised of the area of service.

SERVICES

Pastoral Care. -- During the course of the year this department conducted 938 formal worship services in the chapels, 104 funerals, and 821 ward and/or prison worship services. Fifty-two worship services were conducted by lay readers of the Episcopal church as a volunteer service to the hospital. Twenty-four special services were provided for patients with hearing difficulties and a similar number of sign language classes were conducted for patients and psychiatric aides.

Referral to and from community clergymen increased significantly during the year.

Pastoral visitation continued to be a major source of contact between professional staff and patients. Over 9,500 pastoral calls were made during the year.

The most significant development in pastoral services has been the beginning of a program to utilize volunteer groups from nearby churches and colleges as supervised teachers of religious education. This program is cojointly planned by this department and Volunteer Services.

Clinical Services. -- In addition to their participation in diagnostic staff meetings, in which they evaluated and interpreted the religious behavior and thought processes involved in patient experiences, clinical chaplains spent over 2,150 hours in the practice of pastoral psychiatry. This involved both individual and group counseling. Through the use of special forms chaplains entered progress notes of clinical interest into the records of the patients with whom they worked.

With the growing emphasis on community mental health and the use of consultation teams from the hospital, chaplains of this department joined with other department representatives to provide consultation services to community groups.

In-service Education. -- During the year two programs were set in motion with the purpose of maintaining and increasing the competence and skills of the chaplaincy staff. The first of these is a monthly staff seminar in which one of the chaplains formally presents material from his studies, research, or clinical work. This provides a regular opportunity for professional conversation around the dialogue between religion and psychiatry.

The second program is that of granting brief study leaves to staff chaplains who have been employed at the hospital for three years or more.

Staff and Community Relations. -- The department continued to participate in the interdisciplinary educational programs of the hospital and in the past year provided regular lectures to psychiatric residents, nurses, and psychiatric aides. Special presentations were also provided to psychologists, social workers, music therapists, occupational therapists, and other members of the hospital staff.

Three workshops involving 25 parish clergymen of all faiths were conducted during the year. They were designed to acquaint ministers with the mental health resources at the hospital and also to enlist their support in working toward better mental health within the community.

A course entitled "Introduction to the Pastoral Care of the Mentally Ill" was offered each quarter of the academic year, in cooperation with Columbia Theological Seminary and the Candler School of Theology. A total of 35 seminary students participated in this program.

Several church sponsored groups visited the hospital for tours and a brief orientation. These ranged in age and composition from a Men's Brotherhood group to a youth choir of adolescents. This department worked with Public Relations in planning and conducting these orientations.

Professional Education. -- At the level of full-time clinical pastoral education four of the Chaplain Supervisors on the staff supervised 32 seminarians and pastors. Eight of these trainees were involved in the clinical internship programs. These educational programs are conducted in cooperation with the Georgia Association for Pastoral Care in order to utilize the evaluative resources of that organization. At the mid-point of the training of each chaplain intern a committee composed of chaplain supervisors in the Association evaluates the intern's training and offers guidance in his remaining training and in his future pastoral ministry.

Research. -- A Clinical Pastoral Residency in Teaching and Research has been established. During the coming year two chaplain residents, under the supervision of a chaplain supervisor and a clinical psychologist, will engage in a six-months research project in a particular area of religion and psychiatry.

MUSIC THERAPY

The Music Therapy staff has increased to a total of twenty persons during the current fiscal year. This shows an increase of two additional positions over the previous year. As we continue to grow in personnel strength, opportunity is afforded for an expanded program in Music Therapy, thus reaching more patients through this treatment media. Mr. Herbert F. Galloway, Jr., RMT, Supervising Instructor of Music Therapy Education, left in August for Florida State University on the stipend program to obtain a masters degree in music therapy and thus better qualify him to hold the position in music therapy education. Since this money had to come from the music therapy operating budget, this left a vacancy, the duties of which had to be filled by other members of the music therapy staff.

An interesting personnel trend in music therapy appears to be developing. Two persons with degrees in music education and or applied music joined the staff as music therapy aides. One employee with the same qualifications has been working at this level for three

years, though the music therapy aide position requires only high school graduation. In addition, several applications from persons holding degrees in other areas of music have been received. In one case the employee gave up a position which paid much more than the music therapy aide starting salary in order to work in this field. With aides whose music skills are thus highly developed, the caliber of work possible to achieve at the aide level has thus been rendered much greater. However, there is a definite inequity in the music therapy aide who holds a college degree working along side the music therapy aide who holds a high school diploma for the same salary. Currently the possibility of establishing an advanced music therapy aide position at a higher level for those with degrees in other areas of music is under construction.

In February, as Mrs. Linda B. Ogletree, RMT, completed her clinical training and remained on the staff as a music therapist, it became possible to open a music therapy clinical area in Unit 6. Such a program has long been needed in this Unit, which consists principally of mentally retarded patients and was requested by the Unit Director many months preceding its inception. To this program, some weeks after its beginning, was added a worker in the Neighborhood Youth Corps who has shown sufficient potential that it is anticipated that she will be hired as a music therapy aide in the near future.

The acceptance of music therapy at this hospital as a treatment media has been fairly slow, due largely to the degree of turnover in the professional psychiatric staff. However, during the past year definite, positive development in this area has been noted in nearly all hospital Units. The music therapist in any given Unit must work with large numbers of patients and much of what the program contains must of necessity be that of activity in order to reach as many patients as possible with some form of Music Therapy. It might further be said that this situation is a significant factor in the morale of the music therapist, who must resign himself to this fate in his Unit of approximately 2,000 patients. As with all departments of the Hospital, more staff is needed in music therapy to produce the kind of therapeutic program with music that is possible when the ratio of patients to therapist is much smaller.

In June a much needed enlarging and remodeling of the music library in the Central Music Therapy building was accomplished. The music library contains an extensive popular, classical and jazz phonograph record library, sacred and secular choral music library together with cantatas and oratorios and choral collections, while the sheet music library contains vocal, organ, piano and instrumental music, all cross-indexed and card cataloged. This library services all music therapy Unit programs, the instrumental therapy program and the popular phonograph record library is available on a library loan system to all patients of the Hospital. This room had long since become too small to house what has doubtless become the finest music library of any music therapy department in the country. Adequate space is now available to house these various categories of the library and provide work space for music therapists and music therapy aides to plan their various programs and better use the facilities of the library.

Several concert artists gave performances for patients of the Hospital as well as several Baptist choirs from various communities in Georgia. Prominent among these were Dr. Oswald Ragatz, organist-recitalist and professor of organ at Indiana University School of Music, Dr. Robert Wolfersteig, organ-recitalist and chairman of the department of music at the Woman's College of Georgia and Jeannine Romer, renowned concert pianist.

On December 12 the combined patient chorus of the Hospital presented the third annual performance of the entire Part I of the "Messiah" by George Frederick Handel. This performance was well-attended by members of the community who expressed favorable comment.

On June 5, together with the Department of Occupational Therapy and Recreation Therapy, the Music Therapy Department presented the entire "Naughty Marietta" by Victor Herbert. This was one of the largest such productions in the history of the Music Therapy Department and was very well received. Twenty-two members of the Atlanta Community Orchestra gave their time to come and present this challenging musical with the cast of seventy patients and staff, thus helping to give a more professional sound to the entire production.

Though the past four years have seen tremendous growth and development in the department of Music Therapy in physical facilities, personnel, treatment programs and equipment, the challenge of this program at Milledgeville State Hospital with its twelve thousand patient census ever grows in scope. As far as can be determined this department is the largest Department of Music Therapy in the nation and we take pride in what it has achieved thus far. Much remains to be done. More patients could benefit from the services of the music therapist, more challenging programs in music therapy can be developed and will be developed in future years at this Hospital.

OCCUPATIONAL THERAPY

In its third year of operation under a Registered Therapist, this department has made considerable progress in expanding and improving its services, although personnel shortages have hindered achievement of optimum results. An internship program for University of Florida occupational therapy students was initiated. Three interns participated during the year. The first departmental Christmas party for personnel was held this fiscal year, with all staff members participating.

A brochure has been prepared and printed for inclusion with all projects sold. This gives a simple explanation of the purpose of occupational therapy, emphasizing the therapeutic aspect.

PERSONNEL

During the year 3 personnel have been promoted from Aide-in-Training to Occupational Therapy Aide. Five staff members resigned and one retired. Present staff includes 1 Director, 1 Therapist, 10 Supervising Aides, 34 Aides, 1 Aide-in-Training, 1 Storekeeper, and 1 Intermediate Stenographer, leaving 4 vacancies.

PROGRAMS

The total number of patients under treatment in occupational therapy was 3408. This represents an increase of 9.5% over the previous fiscal year. Of the patients leaving the occupational therapy program, 1348 were furloughed, discharged, or transferred to industry. On the basis, 39.5% of the total case load has shown a high degree of improvement.

Programs have been set up in 2 buildings for mentally retarded children. Each of these programs is arranged so that small groups of selected patients participate in short intensive daily sessions. Specific treatment has been set up in 2 areas, and is carried on under professional guidance.

Our program for regressed patients has received special attention this year, and has been expanded into all female patient areas. Three programs are being carried on for male patients in this category.

All clinics have expanded the number of crafts utilized, to enrich the patient program so that significant activities will be available to all.

A total of 1607 patients participated in 52 parties given during the year. In addition, 17 clinics had Christmas parties for a total of 649 patients. 797 patients were taken on a total of 21 bus rides, and 356 patients from 15 clinics picked berries and grapes at the Colony Farm. 2652 patients participated in 62 shopping trips in the community. Some of these trips included luncheon at a downtown restaurant. 142 patients from 9 clinics were taken to the Milledgeville Fair. Activities on the hospital grounds included taking 740 patients to beauty shops, 132 to the Apparel Shop, 2149 on walks, and helping 20 plant and care for gardens.

Considerable pressure has been exerted by Unit Directors to set up programs in Yarbrough, Binion, and Howell Buildings. As no requests for personal services money had been made by the Units, we have been unable to comply. We have been sending patients from the sensory disturbance wards in Yarbrough Building to occupational therapy clinics in a nearby Unit. This has been especially helpful to the blind patients, for whom a special program has been set up.

Departmental personnel worked closely with other hospital departments and programs, furnishing materials, guidance, and /or escort service for Remotivation, Genetics Research, Recreation, Music Therapy, Garden Therapy, Alcoholics Anonymous, and others.

Projects made by the patients as part of treatment were exhibited and sold at Southeastern Fair, and at the annual meetings of Georgia Association for Mental Health, Muscogee Mental Health Association, and Athens-Bibb County Mental Health Association.

As part of treatment, 1077 items were made by patients and issued to the wards. This involved a cost of \$1000.39. In addition, 350 yards of muslin was issued and 168 phenolic signs made for offices.

EDUCATION

Inservice education included a total of 424 hours of theory and 1196 hours of craft instruction. 26 personnel attended an 8-hour workshop in ceramics given by American Art Clay Company, and 38 had a 4-hour class in ball-point painting on textiles. Eleven staff meetings were held during the year. Two personnel attended a sign language course sponsored by the Department of Religious Services. One staff member obtained a GED Certificate and three attended night school to prepare for this test. Three other staff members attended a course for Licensed Practical Nurses, and three attended adult education sewing classes twice weekly. A field trip was made to the Academy for the Blind in Macon to prepare the personnel for working with blind patients.

Three hundred sixty nine student nurses each attended 3 hours lecture given by the O.T. Director. Other groups receiving orientation in occupational therapy included Public Health Nurses, Psychiatric Aides, Clergy, Psychology Interns, Music Therapy Interns, Recreation Therapists and Interns, Psychiatric Residents, Remotivation leaders, and ward personnel. Fifty persons were included in the above. In addition, the department participated in a Remotivation Workshop, with orientation and demonstration for 78 people. Visitors to the department during the year included the Occupational Therapist from Georgia Mental Health Institute, and a representative of Lowndes County Health Department. An Occupational Therapy Intern affiliating at Medical College of Georgia spent one week visiting our department.

PROFESSIONAL ACTIVITIES

Two staff members belong to the American Occupational Therapy Association. One of these serves on the association's Clinical Advisory Committee to the Consultant in Psychiatric Rehabilitation. The Director attended the annual conference of the association in Miami Beach, Florida. The Director served as vice-president and chairman of the Georgia Occupational Therapy Association until May

1966, at which time she was elected president. Thirteen staff members are associates of this organization, with one serving as chairman of the Ways and Means Committee.

The Director attended a 4-day Seminar on Clinical Education at the University of Florida.

RECREATION THERAPY

The fiscal year 1965-1966 has shown a continuing growth of the professional staff, and training programs in the Recreation Therapy Department. The addition of two registered Recreation Therapists has provided opportunities for expansion of programs in two Units of the hospital.

The Unit Recreation Programs have continued to develop according to the needs of the Units. Each Unit has developed two programs. The first is the Therapeutic Program. These activities are selected to meet specific treatment needs of individual patients. The second is a Diversional Program. The activities of this program are selected for activity sake.

The Intramural Sports Program has been expanded to include all male and female patients, from all units. The number of activities has also been increased, therefore, more patients are able to participate in the area. The level of competition has increased as well as the skill level of the participants. The purpose of this is to develop unit spirit, develop team work, provide a means to learn new skills, or reactivate old ones, and give recognition to the players.

A two day workshop on mental health was conducted for Community Recreation Directors. The workshop was very effective in helping to acquaint these people with the role of recreation in the treatment of the mentally ill.

The Intern Training Program was expanded this year, so that we are now affiliated with four colleges. We had three interns during the past year. The length of the internship varies depending on the school.

The In-Service Training Program for the Recreation Therapy Department staff has been continued. A greater understanding of mental illness by the Recreation Aides has been the result of this program.

The volunteer program continued to increase. The Jaycees from Macon have been added to our program. They come to the hospital once a month and bring some type of entertainment. Another addition has been the Baptist Students from the Woman's College. They come once a week and assist our department in working with a selected group of chronic patients.

An additional group of people that has helped in the expansion of this department has been the Neighborhood Youth Corp. This department had five enrollees of the N.Y.C. This program has allowed this department to increase the number of movies per day from three to eight. The enrollees are used in various other areas of this department.

In association with the Georgia Recreation Society and the Georgia Recreation Commission, the Recreation Therapy Department is in the process of establishing a patient referral system between the hospital and the community. A patient who participated in the Recreation Therapy Program during his period of hospitalization will, upon leaving the institution, be referred to the Recreation Program of the community.

The Recreation Therapy Director and several of the Recreation Therapists attended the Georgia Recreation Society Annual Meeting and participated on the program of the Southern Conference of the National Parks and Recreation Association. The Director has presented a number of lectures on Recreation and the Hospital to clubs, student associations, and several organizations.

With the addition of our new employees, we have expanded our program in all areas. We have continued to cooperate with other departments when requested.

VOCATIONAL REHABILITATION

Vocational Rehabilitation services during the fiscal year were concentrated in the Yarbrough Rehabilitation Center where each patient participated in a comprehensive program tailored to his individual needs and potentiality. As the department did not have sufficient personnel to staff all Units, the rehabilitation counselors involved themselves in the Units only enough to assist the staff in identifying candidates for the Center program. Generally, those patients selected evidenced employment handicaps which would have resulted in considerable difficulty in leaving the hospital and/or re-entering the competitive labor market. The residents, and day patients, at the Yarbrough Rehabilitation Center were those who needed an intensified program of services, requisite for their being ready to leave the hospital to seek social and occupational adjustment. Services rendered the patients included: (1) Vocational evaluation, (2) Occupational and Personal adjustment counseling, (3) Work Adjustment and Work Conditioning, (4) Vocational training, (5) Job and Residential placement, and (6) follow-up in the community. (Each patient worked with by the Department was referred to the "home" counselor at the time of furlough to insure continuity of services and immediate assistance on re-entering community life.)

A statistical analysis reveals that the Hospital counselors screened 2,448 referrals during the year, of which 700 were for the multiple disability ward (fourth floor in the Center). Exclusive of the initial screenings, a breakdown of services rendered is as follows: (1) Information was gathered on 628 former patients (not heretofore known to MSH VR) who had been referred to local Vocational Rehabilitation Staff statewide. (2) 427 patients received psychometric testing and 186 were extensively tested with job sample techniques. (3) 405 patients participated in work adjustment (Industrial Therapy). (4) 459 patients were enrolled in vocational classes. (5) 680 patients participated in three or more MSH Vocational Rehabilitation activities and were referred to the local counselors at time of furlough.

The Department continued its lecture series during the year with the Psychiatric Residents, Public Health Nurses, and Student Nurses. It also cooperated with other departments in orientation programs for

new staff. Also, through arrangement with the State Office of Vocational Rehabilitation, all present and new staff members are given a one to five-day orientation at the hospital for their general knowledge and also to familiarize them with the hospital Vocational Rehabilitation program. This orientation of State-wide personnel is strengthening after-care and community services.

In-service training and educational opportunities increased during the year as The University of Georgia graduated its first class of Rehabilitation Counselors. This Masters program is available for all staff members lacking professional training. Several staff members participated in short courses at the University Center for Continuing Education and in Annual Staff Training Conferences. Four members participated in a VRA Regional Conference on the Rehabilitation of the Mentally Ill at Columbia, South Carolina. Private and public mental hospitals in several states were visited, and two staff members attended a special Institute at Boston University on the Rehabilitation of the Emotionally Disturbed.

The Department enjoyed its first counselor intern with Miss Jane Kay Fondren working with Unit V in the Yarbrough Rehabilitation Center. She received her Master's degree in Rehabilitation Counseling from the University of Georgia in June and accepted employment at the hospital. Other "first" for the Department included a thirty-minute film made of the hospital's VR program which was shown statewide over the Educational TV System. Also of special interest, an article by Ray Brown and W.C. Petty, on the Center program appeared in the February issue of Hospital and Community Psychiatry. This story stimulated much interest on the national level as reflected by the numerous request for reprints and many out-of-state visitors.

There are now four rehabilitation residences in operation with the two established earlier in Atlanta and two this fiscal year - one in Albany and one in Columbus. This program has been most effective in bridging the gap between the hospital and "independent living" in the community for the more severely disturbed, chronic patient. The rehabilitation houses provided temporary residence to 135 men and women during the fiscal year, and it is expected that a larger number will be accommodated during the 1966-67 year since each house will be fully utilized for the entire 12 month period.

PERSONNEL SERVICES

A decline in total employment occurred at the Milledgeville State Hospital during the fiscal year ending June 30, 1966, primarily because of restrictions on filling vacancies necessitated by fiscal limitations. The number of active, regular employees on June 30, 1965, was 3120 and on June 30, 1966, was 3053, a decrease of 67. Most of the loss was in the Service, labor and sub-professional nursing categories. Total professional employment did not change significantly except for a moderate increase in the number of registered nurses.

Virtually every employee of the Hospital received an increase in salary on July 1, 1965, because of an upward adjustment of the pay plan by the State Personnel Board. This amounted to about five percent and was in addition to regular salary advancements.

A major event during the year was the state-wide classification and pay study carried on by the State Merit System which included all of our positions. Actions taken as a result occurred after fiscal 1965-1966 but preliminary work and discussions with the Merit System were during the reporting year. It was necessary to review proposed changes in the classification and pay plan which would affect this Hospital as well as the allocation of each position proposed by the State Merit System. A large number of written recommendations to the Merit System and the Department of Public Health were made relative to this study and a number of discussions and conferences were held with representatives of the Hospital, the Merit System and the Department of Public Health.

In cooperation with the Department of Public Health and the State Merit System a new classification and salary arrangement was created for psychiatric residents and the professional nursing series was extensively revised. A considerable number of mergers of classes also took place in attendant, food service, agricultural and service categories.

Activity in the Personnel Office continued at a high level even though the number of new appointments declined sharply. The following is a tabulation of personnel actions during the year.

Appointments	621		
Transfers	471		
Promotions	104		
Demotions	13		
Separations	606	including	411 Resignations
			95 Dismissals
			54 Retirements
			19 Transfers to other Agencies
			27 Deaths

Rate of turnover 19.8%

A figure obtained by subtracting separations from appointments will not balance with the change in total employment since the latter is based on regular employees in pay status and does not include those on leave of absence without pay on June 30, 1966.

The unusually large number of transfers resulted from racial integration at the Hospital early in the fiscal year involving the movement of both patients and employees.

The turnover rate declined slightly from the previous year (0.6%).

A tabulation of personnel of the hospital by type is shown in the statistical section of this report.

PERSONNEL BY TYPE AS OF JUNE 30, 1965, AND JUNE 30, 1966

	<u>1965</u>	<u>1966</u>
TOTAL	3120	3053
1. Physicians	84	84
2. Dentists	6	8
3. Nurses	96	102

18. Service	253	236
19. Manual Labor	323	299
20. Not Elsewhere Classified	3	3

VOLUNTEER SERVICES

Citizens throughout the state have continued to manifest interest in the Milledgeville State Hospital as evidenced by their contribution of personal services and materials not other-wise available to the patients.

The Garden Therapy Program is the highlight in the lives of many patients. The beautiful borders around the buildings are an inspiration to all who visit the institution as well as to the residents. This activity is financed by the Garden Club of Georgia, Inc. At the 1966 State Convention, a resolution was unanimously adopted to continue support of this program. During the past year, 486 clubs contributed \$5,820.23. There were 63 volunteers who contributed 2183 hours of service at the hospital in this project. Many others gave numerous hours away from the hospital which was essential to the total program operation.

In addition to the regular activities, two other major projects are being undertaken. The first is the renovation of the fish pond located in front of the Powell Building. Plans have been drawn up gratis by Mr. J. White, Marietta, Interior Decorator. The hospital is cooperating in this endeavor by supplying labor from the Engineering and Maintenance Departments. Necessary materials amounting to approximately \$750.00 are being purchased by the Garden Clubs.

The second special project is the establishment of an eight acre park to be located in the wooded area adjacent to the Rivers Building. Detailed plans have been drawn and submitted by a group of University of Georgia senior horticulture students under the supervision of Mr. Hubert Owen, Department Director. This is a project being undertaken by the Azalea District under the direct sponsorship of Mrs. Claude Brown, Therapy Chairman. The total cost is expected to be between \$40,000 and \$50,000. Funds are already being received and work is expected to begin in the fall.

Garden Therapy was the major theme of the State Garden Clubs at the National Convention held in New Orleans, Louisiana in the spring. The scale model of the above proposed park was one of the highlights of this exhibit.

The Alcoholics Anonymous Program continues to play an important role in the total program for the alcoholic and drug addicts. Milledgeville, Warner Robins, Sandersville, Macon, Monticello, Dublin and Louisville alternate sponsorship of this program. Progress is measured by the growing number of ex-patients who are program speakers at the meetings sponsored by their respective groups.

The Sixth Anniversary of this Hospital Group will be held in the auditorium on Sunday, July 17th. A large statewide representation is expected to attend to hear a noted A.A. speaker and to have fellowship with patient members.

Escort service for all the meetings is provided by four capable Occupational Therapy Aides. In cooperation with the Nursing Education Department, student nurses attend one A.A. session to obtain first-hand knowledge of the program.

The patient library was decentralized during the summer 1965 for the purpose of establishing a library in each of the eight units so that the books would be more accessible to the patients. There is not a librarian on the hospital staff so as rapidly as possible, libraries, each containing approximately 2,000 books, are being set up by volunteer librarians. To date three of the libraries are in operation and a fourth is in the process of being readied for service.

The Chairman, Library Services, Georgia Federation of Women's Clubs has visited the hospital, has become well aware of the material and personnel needs of this program, and has promised all efforts to provide some relief through her state organization.

A number of complimentary daily newspaper subscriptions are being received for the Unit, Veterans and Yarbrough Rehabilitation Center Libraries. This provides a much needed contact between the community and patients and a means for him to keep informed of current happenings in his home area.

The Cub Scout Program for the retarded was reactivated in May following the establishment of the Retarded Unit. Some thirty patients are receiving benefit from this project. An employee, who is well

experienced in scouting, is serving as den mother and leader on off-duty time. Two attendants are working very closely with her and together they have a most effective troop.

A Girl Scout Troop for fifteen retarded children was formed in June 1966. A most capable volunteer is working with two attendants in the organization and conduct of the activities necessary to make this an effective service. The local Elks Club is providing the essential financial backing.

The Recreation Department has continued to effectively utilize services of college students, church groups, civic service, and fraternal organizations. Parties, planned activities in which patients participate, and entertainment programs have been enjoyed by a very large group of patients.

The Wesley Foundation Students and the "Y" Students were joined by the Baptist Student Union from The Woman's College of Georgia in the spring quarter. All of these groups expect to return in the fall 1966 and resume activities in the units where they formerly served.

Of very special interest were six students from Mercer University, Macon, Georgia who worked on an individual basis with children in the retarded area under the supervision of the Recreation Therapist during the winter quarter. The Macon Chapter of the American Red Cross provided a station wagon for the group to make this weekly trip.

A very special treat for a select group of patients (boys and girls) from Unit VI was provided by the Milledgeville Junior Woman's Club when they invited them to attend several off-campus activities.

The Macon Jaycees have arranged for monthly evening entertainment programs which have been enjoyed by a number of patients throughout the institution. This organization has challenged other such clubs in this area to provide similar programs.

The patients from Elbert County again have had the pleasure of a bountiful picnic lunch and an opportunity for fellowship provided by

members of their Mental Health Association. Other Area Mental Health Associations are urged to plan similar activities for patients from their respective counties as another means of demonstrating their personal concern.

The Presbyterian Women of the Church from Louisville and a young W.M.U. Group from the First Baptist Church, Milledgeville, meet regularly during the month with groups of patients. They plan a varied program which is most interesting to the patient participants.

Members of the Georgia Cosmetologists and Hairdressers Association more than doubled their number of participants for their work day at the hospital. There were 137 who provided the following services over a scheduled two day period: 84 permanents, 232 haircuts, 244 hairsets, 246 shampoos, 126 rinses, 6 hair dyes, 28 manicures, 18 scalp and massage treatments.

The equipment for all seven shops donated in 1965 by this organization has been installed by the Maintenance Department and has been in use for several months. Plans are for this group to use available funds to purchase hydraulic chairs to use in these new shops.

The Public Relations Representative cooperated with this project by taking group pictures of the affiliates and also of individuals and groups working with patients.

The hospital beauticians are to be commended for the manner in which they worked with these volunteers and for the competent way in which they handled the patient appointments. The officers and members of this association have been so pleased with the results that they are tentatively planning for three days service in 1967.

The Apparel Shop is continuing to provide a most valuable service to those patients who do not have funds with which to purchase personal clothing. Businesses, organizations and individuals have been most generous with their donations to aid in keeping an adequate stock available. Of special note is the very large supply of ladies underwear which is donated quarterly by one of the large manufacturing concerns located in Georgia. This has relieved considerably the original problem of having these non-issue hospital items available.

In addition to serving the indigent patients who remain in the hospital, assistance is provided by those patients who leave the hospital under the auspices of Vocational Rehabilitation and also to those going into nursing homes.

Vocational Rehabilitation is using the Apparel Shop as one of the training areas for patients under their guidance and supervision. These patients have been of invaluable aid to the Store Manager in serving the large number of patient customers and performing other related duties. This shop now averages 125 patient customers per week.

The Art Class held in West Arnall provided a means of self expression and much pleasure to a group of patients for several years. The class has been temporarily discontinued because the volunteer art instructors are not presently able to give of their services. However, this is expected to resume in September.

One volunteer in the Social Service Department continues to give invaluable aid in the Psychiatric Out-Patient Clinic by having numerous interviews with the families of patients returning for this service.

Annually the number of Forgotten Patients being sponsored by organizations and individuals increases as the need for such assistance becomes more widely known. Presently 175 patients are benefitted and no doubt this is one of the most appreciated services provided. Patients are encouraged to write letters of appreciation to their benefactors which can be considered of therapeutic value to them.

The United Church Women, under the Direction of Mrs. L.L. Austin, Chairman, have continued in their untiring efforts of furnishing day rooms. Four new day rooms plus chairs for the Walker Building Library and a special dining room project in the Green Building have been supplied.

The United Church Women of Athens made a special tour of the hospital to see the needs preparatory to a drive for day room funds. They have a goal of two large day rooms which will cost approximately \$2,000.

The United Church Women in Columbus, headed by Mrs. J. Winford Martin, have provided funds for two large day rooms. This group certainly deserves commendation for all they have done for this institution during the last ten years.

The 1965 Christmas Program was perhaps one of the most successful to date. An adequate number of gifts were provided through the M-Day Program, Mental Health Associations, church, civic, fraternal and service organizations. The Nursing Service, Recreation Department, Occupational Therapy, Public Relations, Religious Services, Dispatch and Patients' Benefit Fund cooperated in completing the responsibilities associated with this occasion. There were eleven parties for patients of different religious faiths sponsored by their respective churches. Of special interest was the party for 1,000 Baptist patients which was sponsored by the Negro Baptist Churches in the Macon Area with Reverend H.R. Rancifer serving as Chairman. This was their first endeavor and they are to be commended for the efficient manner in which this affair was financed, planned and executed.

The manager of Radio Station WSOK, Savannah, Georgia again brought an excellent group of entertainers for a special program in the Washington Building Dining Room. This annual program has become so well known that plans have been made for them to perform in the auditorium in 1966 where the number of spectators will not have to be so restricted.

Among the non-expendable items that have been donated are: washing machines, clothes dryers, fans, ice cream freezers, wheel chairs, chair tables, electric stoves, refrigerators, bedspreads, drapery materials, hair clippers, hair dryers, and a large quantity of playground equipment. Toilet articles, cosmetics, and tobacco products have been generously supplied to supplement those provided through hospital resources.

This department is most grateful to the personnel of this institution for the excellent manner in which they have received the Volunteers and for their cooperation in keeping the Director well informed of their current needs. This cooperative spirit is also reflected by the many organizations and individuals who have been so generous with their time, talent and funds. The patients of this hospital have definitely been benefitted as has been indicated throughout this report.

PUBLIC INFORMATION

The continued expansion of the hospital's varied programs have increased the load on the Public Information Department to such a point that the acquisition of additional help became mandatory. Accordingly, the Division of Mental Health of the State Department of Public Health agreed to the proffer of a scholarship to Mary Bryant Archer, a graduate of Baylor University Journalism School, to pursue her Master's degree in Mental Health Information with the proviso that she would join the hospital's Public Information staff upon graduation. Miss Archer will return in June 1967 to complete a year's internship at the hospital and then will return to Syracuse University for her Master's degree. This will greatly relieve the load carried by the present Public Information staff and at the same time provide much better coverage of the many events now taking place in the hospital which are of interest to the general public.

The department continues to provide informational service on the various phases of the hospital's treatment, research and educational programs to the mass media as required and excellent coverage has been received during the year. Several feature articles have appeared in state newspapers and the hospital has had mention in a number of professional journals.

The tremendous demand for seminar programs for high school and college students which are operated co-jointly with the Department of Psychology has resulted in a reorganization of this program and because of the involvement of staff time it has been confined to Tuesday and Thursday of each week. It is recognized, however, that flexibility in scheduling is necessary and occasionally special groups are accommodated at other times wherever justification for this exists. The annual number of visitors in this particular category continues to run around 5,000 per year.

The patients' newspaper known as The Builder which is supervised by the Public Information Department is now providing therapeutic experience for some 35 patients and this number is growing

daily as additional patients are referred from the Vocational Rehabilitation section. Discharges from this program are above the average and the return rate is lower than that of the average hospital return rate.

During the year professional brochures were prepared for the Departments of Psychology, Psychiatric Residency Training, Religious Services, Music Therapy and Recreational Therapy.

Within the limits of time and material, the department furnishes photographic services to the various hospital departments requiring same as well as doing all necessary photographic coverage for press releases during the year. A competent photographic specialist should be secured to take the responsibility for this section of the program as there is sufficient darkroom work now available to keep one man busy all day long.

Close liaison is maintained by the Public Information Department with the Public Information Officers of the Georgia Department of Public Health and the members of the hospital department appreciate the ready cooperation and helpful assistance that the Health Department's Public Information section has provided during the past year.

RESEARCH

Research at the Milledgeville State Hospital consists of clinical research carried on by members of various professional disciplines and certain investigations of the Department of Research in the areas of Medical Genetics and Psychopharmacology.

The prime objective of the Department of Research with office and laboratory rooms in the Yarbrough Rehabilitation Center is to provide a laboratory setting in which patients having some training or being temperamentally suited for laboratory work may become re-adjusted and learn laboratory techniques with a view being placed in a laboratory work situation on the outside.

Teaching is a second responsibility. During the year Dr. Keeler gave 22 lectures to Psychiatric Interns, Nurses, College Students, Service Clubs and others. Dr. Mellinger gave a series of 25 lectures in Clinical Pharmacology at Grady Hospital. Consultation has been provided in Medical Genetics for physicians and relatives of patients.

Basic research in Medical Genetics has included studies of hereditary abnormalities at M.S.H., and certain specific problems on the hereditary alteration of behavior trends.

We have continued our study of special sensitivities both physiological and behavioristic in Redheads: thin skin, allergies, free bleeding, tendency to blush, reduced lung efficiency, etc. These suggest the advisability of caution with regard to drug dosages for Redheads.

Criteria diagnostic of behavior states were studied in the fearful, Red fox and a graded scale of responses for comparing the strength and nature of many tranquilizers in dispelling the symptoms of fear, anxiety and phobias in these animals. Whereas, some tranquilizers require five days for adjusting the patient to the medication, a certain drug was found to require only two hours to produce the maximum affect. On the third trial with this drug an adult wild Red fox, recently caught in a trap, climbed onto the observer's lap to take a piece of meat offered. NIH Grant 11075-01. A paper on this work by Dr. Keeler and Mellinger prepared for the World Congress of Psychiatry, Madrid, 1966.

The mental life of Cuna Indian albinos was studied through dream analysis in cooperation with Dr. R.L. van de Castle of U. of N.C. Medical School. The dream content differed between "more civilized" and "less civilized islands", and the albinos appeared to be slow in maturing mentally. NIMH Grant 10164-01

In the area of Psychopharmacology a spectrofluorometric method developed in this laboratory for the recognition of phenothiazine tranquilizers was applied to patients under medication. Analyzing the fluorescence spectra of these drugs in urine material was found to be a useful method for the identification of the drug in a patient. Those

not swallowing their medication could be easily detected. Urines of patients on varying dosages of chlorpromazine, thioridazine and chlorprothixene were analyzed by this method, and a high incidence of positive tests were found. Chlorprothixene, which would still be recognized in 1.0001 mg per milliliter of urine, was easiest to identify. The findings of these experiments are published in the International Journal of Neuropsychiatry, 1: 466-472, 1965

Due to the recent discovery of the importance of dopamine in Parkinson's disease and in certain tumors of the nervous system a method for the major metabolite of dopamine, homovanillic acid, in human urine was developed. The excretion of homovanillic acid was studied in various animal species as well as in patients of Parkinson's Disease, Huntington's Chorea, hypertension and normal volunteers. The findings of these studies will be published.

BUSINESS ADMINISTRATION

The appropriation for the fiscal year 1965-1966 was increased from \$17,500,000.00 to \$19,000,000.00. Additional funds in the amount of \$76,000.00 were approved for building improvements to meet the requirements of the State Fire Marshal and \$59,000.00 were transferred to renovate the Veterans Building.

The work on the Veterans Building is nearing completion and will be finished early in the next year.

Practically all of the patient domiciliaries have received Certificates of Occupancy and all of them will be certified in the near future. A central fire alarm system approved by the State Marshal is being installed. Recommendations have been made for an additional fire house and additional equipment; however, funds have not yet been provided for this purpose.

No decision has been made concerning the final disposition of the farms. Recommendations were made that the farm be operated by

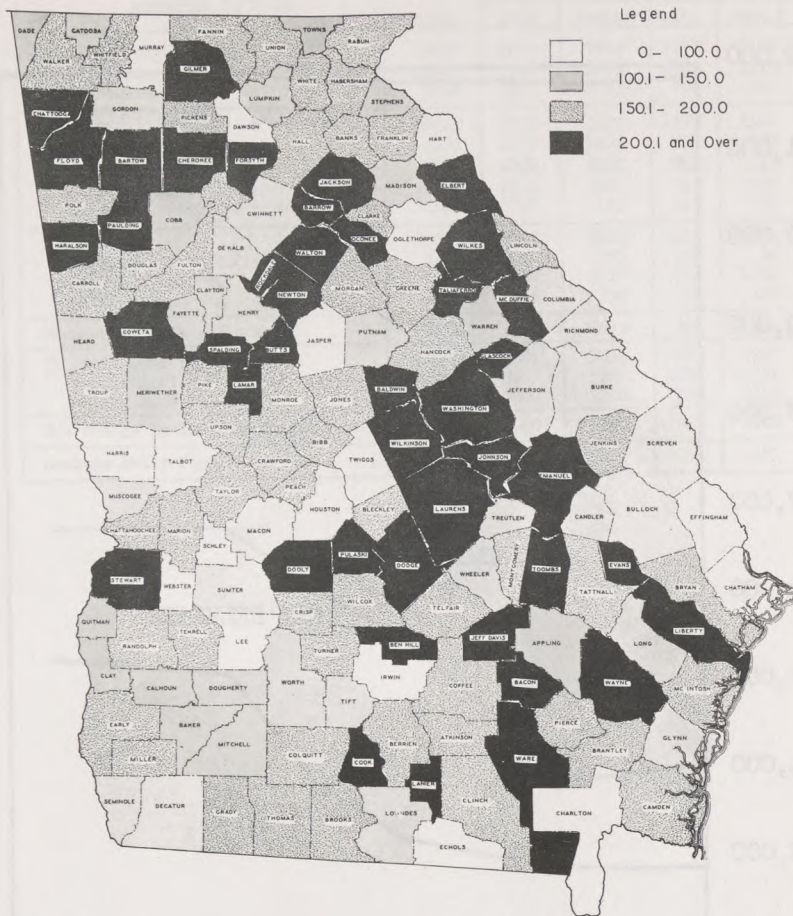

the State Department of Agriculture; however, at this time no arrangements have been made for the transfer. We are still operating; however, it becomes increasingly difficult to maintain the farm equipment and we are unwilling to invest funds in equipment with no firm decision having been made concerning the future operation.

The State Highway Department has completed a survey of the main streets and thoroughfares on the hospital grounds. A contract has been let for the first phase of this construction (Lawrence Road) and will be completed in the near future. We hope that additional contracts will be approved and let during the next fiscal year. The road leading from the fire house on Lawrence Road to the Yarbrough Building Road has been rebuilt with hospital forces doing the grading and constructing the curbs and gutters.

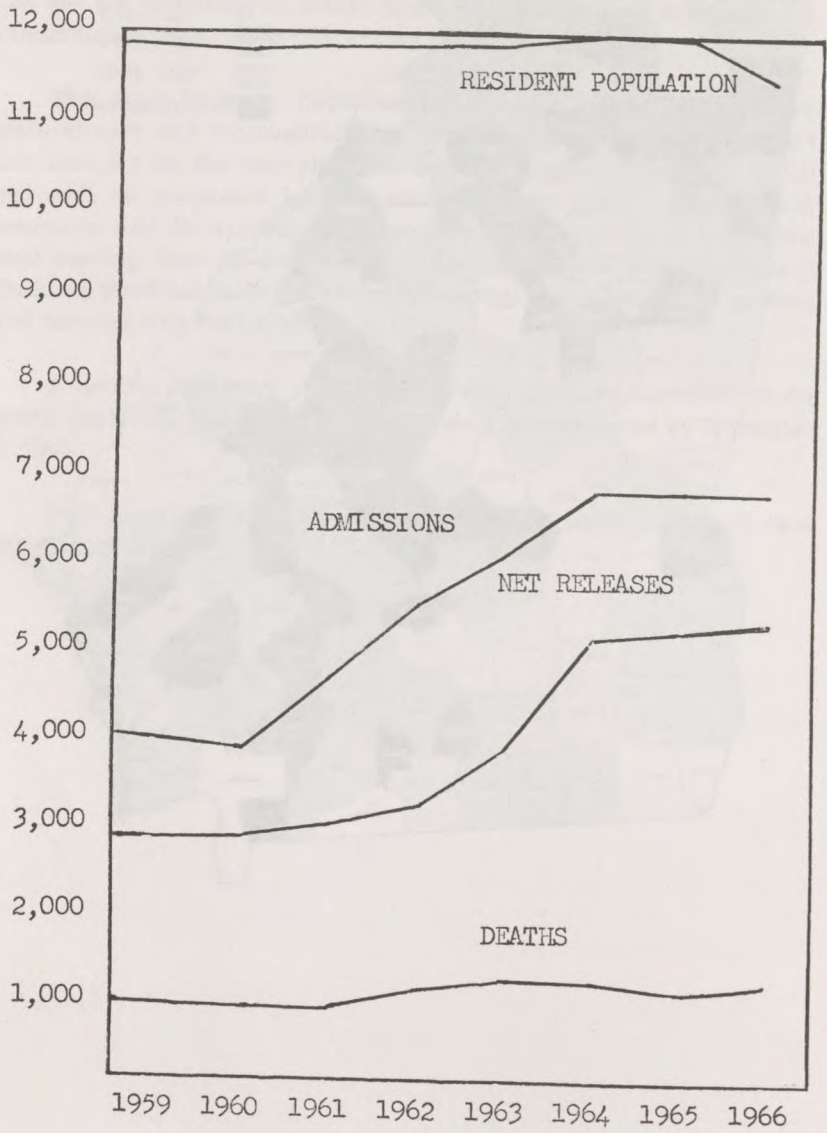

A modern four-story passenger elevator is being installed in the Jones Building. This work is scheduled to be completed by November 1, 1966.

Your attention is directed to the financial statement which is a part of this report.
